Closed Cell Physically Crosslinked polyolefin foam sheet insulation
Setting the Standard

Thermobreak® is the leading and most innovative polyolefin foam thermal insulation available to the HVAC and Building industry worldwide. Thermobreak’s performance is unsurpassed.

Thermobreak® thermal insulation is an all-in-one closed cell physically crosslinked polyolefin foam that is manufactured in compliance to ASTM C1427 Standard.

Thermobreak® was developed in Australia and has sold worldwide for over 25 years. The revolutionary insulation product has a factory applied reinforced foil facing and adhesive backing. Thermobreak® enables much faster installation and eliminates many errors and limitations encountered when using older insulation technology.

Thermobreak® is manufactured using our proprietary physically crosslinked polyolefin foam technology, invented and commercialised by the Sekisui Chemical group in Japan. The technology allows crosslinking of the polyolefin without the use of chemical agents. Instead the Sekisui process utilises clean and precise crosslinking through irradiation (physical) means.

Sekisui has been manufacturing crosslinked polyolefin foams since 1967. Today Sekisui Foam division is the largest and leading crosslinked polyolefin foam manufacturer in the world operating 10 foam factories located in Europe, USA, Thailand, Japan, Korea, and Australia.

Our commitment to quality and the protection of the environment is embodied by our operations all being certified to ISO 9001 Quality Assurance, ISO 14001 Environmental and ISO 18001 OHAS Standards.

Technically Superior

Our unique physically crosslinked technology results in a smaller and more evenly distributed cell structure. Cell structure directly affects thermal conductivity and vapour permeability. Both are key factors in insulation performance.

**Thermal Conductivity:** 0.22 BTU.in/h.ft² (73°F) is the lowest of any flexible insulation material. On equivalent thickness basis, Thermobreak® provides up to 18% better insulation than elastomeric and chemically crosslinked foams.

**Vapour Permeability of almost zero** ensures our thermal conductivity remains relatively constant for a period of 10 years thus significantly contributing to building sustainability and energy cost reduction.

Vapour Permeability = 0.002 perm-inch  
Permeability Resistance Factor: \( \mu > 80,000 \)

Third Party Certification & Testing

Thermobreak® is third party certified ensuring that important technical specifications and test results are third party verified through factory assessment or market surveillance. There are published online for customer verification and updated as per the certifying body regulations.

Compliance to International Fire & Smoke Standards for duct and pipe insulation

> British Standards BS 476 (Parts 6 and 7)
> National Fire Protection Association (NFPA) – NFPA 90A and 90B
> American Standards ASTM E84, ASTM C411
> Australian/New Zealand Standard AS 1530.3
> European Standards – EN 14313
> International Standards – ISO 5659
> UL94 HF-1

Our testing regime includes various thicknesses in the range to ensure safety across all thickness used in projects.

Proven Reliability for Over 25 Years

With Thermobreak® installed in over 600 projects worldwide, our experience and results speak for themselves.

Tested and proven and in a variety of climatic conditions Thermobreak® has established an enviable reputation as a quality, reliable, closed cell insulation performing flawlessly and delivering significant energy savings to building owners and operators.

Energy Efficiency & Building Sustainability

Building Sustainability, Energy Efficiency, Indoor Air Quality and Health & Safety, are all key elements embodied in the Green Building concept.

Green buildings are designed to reduce the overall impact of the built environment on human health and the natural environment through energy efficiency, protecting occupant health, improving employee productivity, and reducing waste, pollution and environmental degradation.

Central to the green building concept is thermal insulation. Thermobreak® insulation is manufactured to support and comply with such initiatives and enables credit point accumulation through various building accreditation systems such as LEED and Estidama.

> Green Star Compliant (VOC)  > Relatively constant thermal conductivity over a 10 year period
> No CFCs or HCFCs  > Zero PVC, Zero Formaldehyde
> Low GWP  > Compliance to REACH Directive
> Superior thermal insulation  > Resistance to Mould Growth
>  > Non-Allergenic Properties
>  > Dubai Central Laboratories (DCL) GBR certified

Quality Materials Engineered to Last

Thermobreak® is supplied with factory applied reinforced aluminium foil facing and repositionable acrylic tissue adhesive system. Our materials are of the highest quality.

Our aluminium foil facing is reinforced providing additional physical protection to the insulation and at the same time reducing heat flow.

Thermobreak® is the only material that uses tissue interlayer based adhesive system. Unlike conventional direct coated adhesives, our system ensures that the adhesive provides 100% coverage on the duct surface and on the foam insulation. This feature also provides the additional benefit of repositionability, an essential requirement during installation. The insulation can be lifted off the duct numerous times during alignment without tearing the insulation.

In keeping with current green building trends and demands such as indoor air quality, our adhesive system is low VOC (Green Star) compliant and offers credit points for building ratings systems such as LEED and Estidama.

Technical Support & Distribution Network

Backed by the technical expertise of Sekisui, a global multinational, our commitment and technical support to our customers is unrivalled. Our office locations throughout Asia Pacific, India and the Middle East provide technical support to our customers and distributors.

This includes our ThermaCalc® thickness selection software, heat flow and temperature profile analysis software, a series of Technical Information Bulletins for M&E professionals, detailed Installation Instructions and full set of third party certificates.

Our extensive distribution network ensures that materials are locally available at all times. For your nearest distributor please consult our website.

Complete Range for your HVAC Insulation Needs

Thermobreak® is available in a complete range to cover typical HVAC requirements:

> Thermobreak® Sheet and Tube (duct and large pipes, underslab)
> Thermobreak® LS - FM approved insulation products (sheet and tube)
> Thermobreak® NO Clad - Sheet and pipe insulation for external applications and heavy duty traffic areas
> Thermobreak® AcoustiPlus - Fibre free acoustic liner with factory applied acrylic adhesive
> Thermobreak® Ductseal - UL 94 HF-1 rated duct seal foam
> Thermaloc® - Pipe supports for cold and hot systems
**Physical Properties**

- **Material:** Physically (irradiation) crosslinked closed cell polyolefin foam with factory applied reinforced aluminium foil and acrylic adhesive backing.
- **Density:** 1.5 lb/ft³ (foam core only)
- **Thermal Conductivity:** 0.22 BTU.in/h.ft² (73°F) (ASTM C518)
- **Water Vapour Permeability:** 0.002 perm-inch (ASTM E96)
- **Water Vapour Permeance:** 0.0034 perm
- **Water absorption by volume:** <0.1% v/v (0.00038 g/cm²) (JIS K6767)
- **Permeability Resistance Factor:** μ > 80,000
- **Resistance to fungi:** Zero Growth (ASTM G21)
- **Ozone Resistance:** Excellent
- **UV Resistance:** Excellent
- **Operating Temperature Range:** -112°F ~ 212°F (no adhesive)
- **GreenStar Rating:** Low VOC Emitting (ASTM D5116)
- **Physical Property Requirements:** COMPLIES (Type II - Sheet) (ASTM C1427)
- **REACH Directives:** COMPLIES (1907/2006/EC)
