

Animal Skin Irritation & Toxicity Studies of Minicel

Minicel foams were tested for Cytotoxicity, Primary Skin Irritation, Oral Toxicity, and Ocular Irritation to illustrate the excellent properties of these foams for medical, health care, and toy use. We do however; recommend that customers test the particular foam to be used to assess the acceptability for use in the specific applications.

Grades Tested

The following results were obtained for the Minicel grades listed below:

Minicel L200NA
